P01 / PAYROLL

Set up the employee and pay period

Payroll / Employees and Leave · Settings / Accounting / Payroll and Mandatory

Start with the employment agreement and the approved settings for the month.

01 **Check the employee record**

Verify employee code, contract start date, active status, salary amount and currency, payroll clearing account, PIT/SSO participation and approved sharing arrangement. Match the clearing account currency to the salary currency.

02 **Open the correct month**

In Payroll Entries, select the payroll month, employee roster and calendar. Review working days, holidays, scheduled fractions, approved leave and contract changes effective during the month.

03 **Review the salary basis**

Oon Jai uses a fixed 22-day monthly basis. For a first month, the app prorates using eligible scheduled paid days on or after the contract start, capped at the full monthly salary. The hourly rate uses the daily rate divided by configured hours per day.

04 **Record the inputs**

Retain the contract or authorized change, effective date, approval and employee code. For foreign pay, enter the calculation rate, rate date and source before reviewing the LAK figures.

First-month example · LAK

A 4,400,000 monthly contract with 11 eligible full paid days earns 4,400,000 × 11 ÷ 22 = 2,200,000 before adjustments. Dates before the contract start are marked as pre-employment.

Before you finish

Compare contracted pay, earned pay and the proposed clearing account employee by employee before entering deductions.
