P06 / PAYROLL

Save, close and prepare the payroll journal

Payroll / Entries / Save & Close Payroll · Salary History

Closing saves the approved calculation. Posting is a separate action that creates or revises the linked journal.

01 **Review the run**

Check all employees, attendance, gross-to-net breakdowns, recoveries, statutory shares and final payments by currency. Confirm the calculation date, rates and source. Preview the payroll calculation report.

02 **Save and close**

Select Save & Close Payroll. Wait for confirmed storage and verify the month in Salary History. A closed run may still be awaiting its journal. Resolve a pending device save under the same record.

03 **Prepare the template**

From the run or Salary History, open its journal. Use the default or saved layout, select an eligible employee account for each employee, resolve nonzero reimbursements and inspect the journal date. Retain the calculation rate evidence in the description.

04 **Choose the posting route**

Prepare in Transactions opens the editable journal for review. Post to Active Journal requests posting directly. Use one route for the run and verify the linked journal ID after confirmation. A saved layout or preview carries no posting receipt.

In the history row

If the month is closed and marked as not journaled, open that same record, prepare its journal and check the posting status. Creating another monthly payroll would duplicate the run.

Before you finish

The closed payroll, linked journal and calculation report must refer to the same month, employees and saved figures.
